

## The Lottery: A Tax on Those Who Flunked Math

- Monique Lloyd

Lectures

## Developing a QL Program: How Does Your Garden Grow?

Judith Moran  
Director of the Math Center  
Trinity College Hartford CT  
judith.moran@trincoll.edu

PREP Workshop Macalester College  
June 2005

1. Overview of Trinity's QL Program
2. Second Tier QL Course
3. Discipline/QL Course
4. QL-enriched course
5. QL-course-specific presentation

### Components of Trinity's QL Program

1. **QL Requirement** instituted and overseen by full faculty
2. **Math Center Advisory Committee** of nine faculty from across campus, including one (other) member of the Math Department, and Associate Dean of Faculty
3. **Assessment of all incoming students** in four areas:
  - Numerical Relationships  
proportions, percents, estimation
  - Statistical Relationships  
data analysis, elementary probability
  - Algebraic Relationships  
modeling, functions, algebra
  - Logical Relationships  
fallacies, arguments, counterexamples

### 4. Foundation Courses and Quantitative Support

(peer tutoring center)

*Contemporary Applications: Math for the 21<sup>st</sup> Century*  
*Cityscape: Analyzing Urban Data*  
*Earth Algebra: Modeling the Environment*  
*Hartford Current Issues: Logic in the Media*

### 5. Other QL courses:

*Fallacies for Fun and Profit* (First-year Seminar)  
*Mathematics of Equity* (Math Distribution Credit)  
*Skepticism and Belief* (Science Distribution Credit)  
*Visually Displaying Data: Graphical Literacy* (Math Distribution Credit)  
*Mathematics of Patterns* (Math Dist. Credit)  
*Geometry in Art and Architecture* (Math Dist. Credit)

**6. QL-enriched courses:****QL Across the Curriculum**

courses supported by grants from the Dean of Faculty and the NNN:

*Introduction to Earth Science*  
*Adjustment and Transition: The Political Economy of Sub-Saharan Africa*  
*Introduction to Environmental Science*  
*Math, Disease, Race and Colonialism in the Americas*  
*Introduction to Health and Human Rights*  
*Introduction to American Public Policy*  
*Foundations of Modern Science*  
*Math as Music, Music as Math* (Tutorial College)  
*World Population*

**7. Presentations in other non-mathematics courses:**

*Art and History in Venice*  
*Dante Seminar*  
*Symmetry & Patterns in Science, Art, Math and Music*  
*Colonialism in Latin America*  
*Interdisciplinary Science Seminar* (with Barbara Walden)  
 one week's work on math and physics of quasicrystals

**8. College and Area Presentations**

Tutorial College – Mathematics in Arcadia  
 College wide and public lecture: *The Art and Geometry of Italian Pavements*  
 Diaspora series, Trinity. *Cultural Manifestations of Mathematical Patterns: from Moorish Ornament to Escher's Prints*

**9. Interaction with colleagues in other institutions**

MAA SIGMAA

NECQL (Northeast Consortium for Quantitative Literacy)

10th annual meeting April 2006 Amherst College  
 NNN first meeting June 2005

**10. Professional Development**

PREP QL Workshops last three summers and in June 2005 Macalester College NOW  
 Contributed paper session at next January's combined math meetings in San Antonio

**11. Program and QL Assessment**

Along with other NNN sites Hollins University and The Washington Center, Trinity participated in an NSF QL assessment grant in 2004.

**This is an area where there is much to be done!**

**There Are Many Paths to Enlightenment...**

**Lao Tzu**

Second Tier QL Course:

### Visually Displaying Data: Graphical Literacy

### Visually Displaying Data: Graphical Literacy

#### Components of Course:

#### 1. Analysis and creation of graphics including:

tables, bar graphs, stacked bar graphs, data maps, multiple bar graphs, line graphs, Pareto charts, stacked line graphs, space-time narratives, pie charts, time-series, histograms, projections, binning and aggregating data, small multiple displays, scatter plots, demographic displays, double y-axis graphs

### Visually Displaying Data: Graphical Literacy

#### 2. Workshops and Speakers:

Excel Workshop  
 GIS Workshop (ArcView)  
 Ivan Kuyzk Director, Cities Data Center,  
 "Using Hartford Data"  
 Professor Noreen Channels  
 "Literacy Rates in Hartford County"

### Visually Displaying Data: Graphical Literacy

#### 3. Readings:

*The Visual Display of Quantitative Information*, 2nd edition,  
 Edward R. Tufte

*Visual and Statistical Thinking*, Edward R. Tufte

*The Cognitive Style of PowerPoint*, Edward R. Tufte

Handouts from the Visual Revelations column of *Chance* Journal,  
*Mapping it All Out*, and *How to Lie with Maps*, by Mark  
 Monmonier,

Articles including "Big and Bad," *The New Yorker*, "Estimates of  
 Adult Literacy Rates in Hartford, CT,"

### Visually Displaying Data: Graphical Literacy

#### 4. Notebook:

This contains examples of both good and bad graphics, collected by each student over the semester, and includes a discussion of each graph in terms of what about it is effective or data distorting.

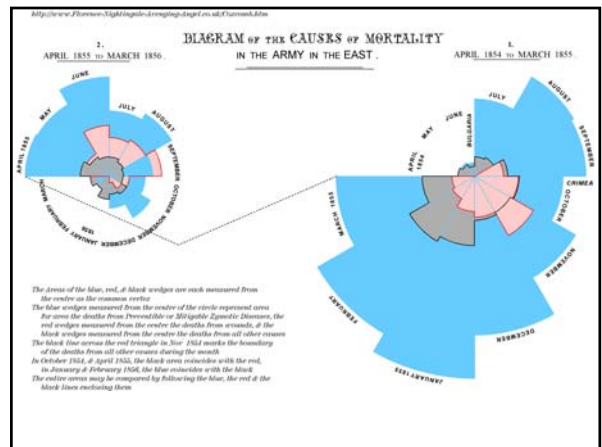

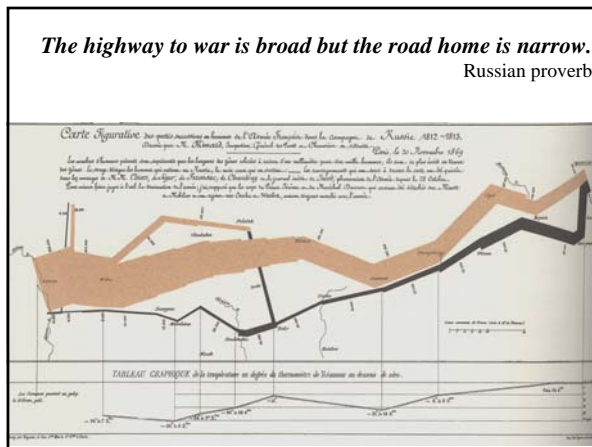

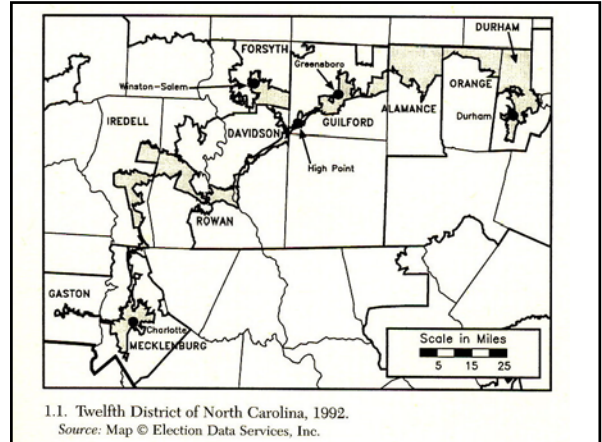

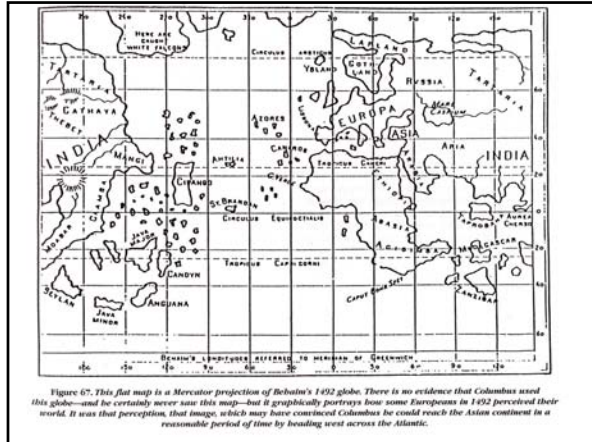

I provided nearly thirty topics and questions such as:

"Find an example of a 3-dimensional display in a recent news report. Are three dimensions needed, or are they included for cosmetic reasons? Comment on the effectiveness of the display. Could another display have been used to depict the same data?"

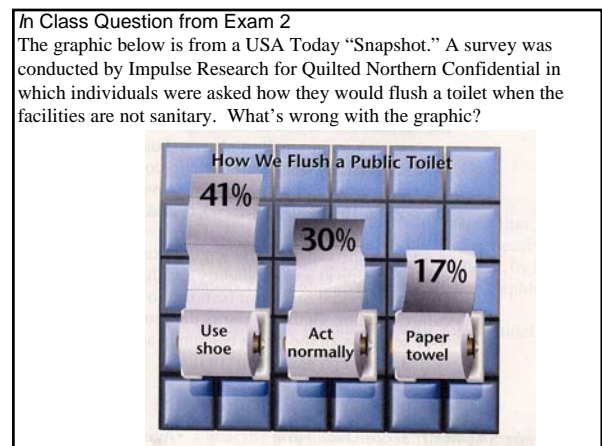

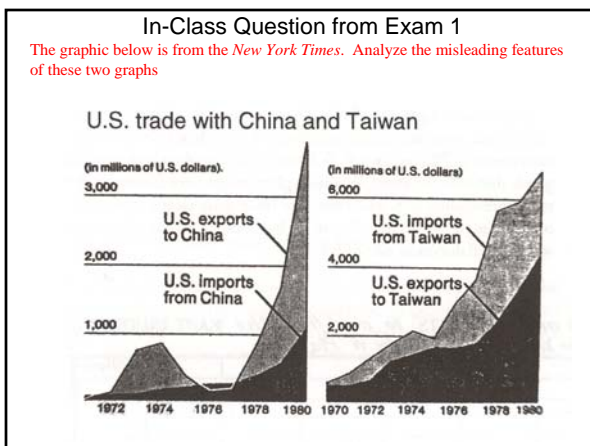

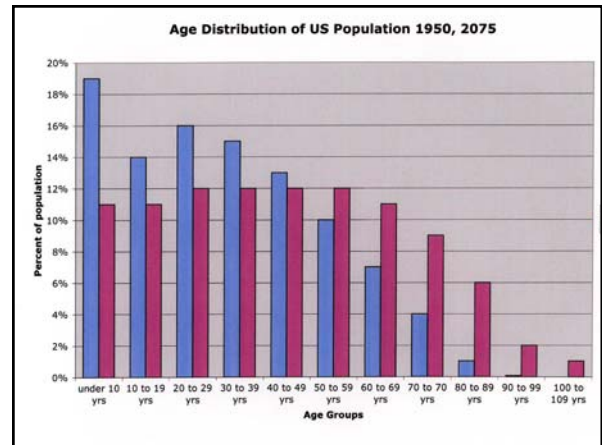

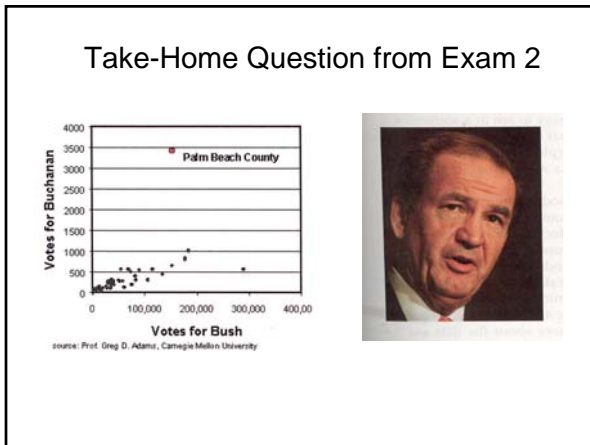

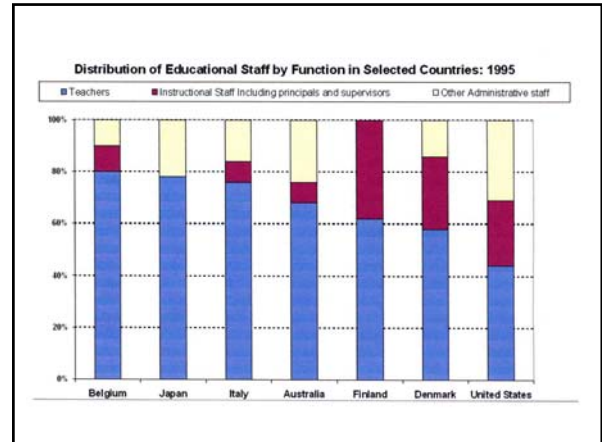

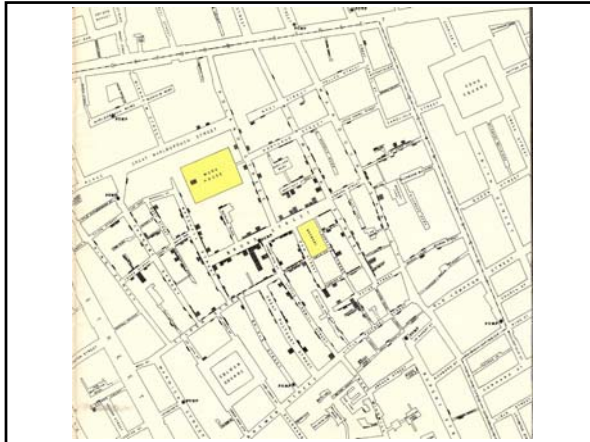

### Visually Displaying Data: Graphical Literacy

#### 5. Community Learning Project

Each student will be assigned to one city or town in Hartford County. Using the Hartford County data set supplied by Ivan Kuyzk, present a graphical portrait of "your town." How does it differ from and resemble other towns in your group, and the other towns in Hartford County? Present your information using Excel and Power Point and coordinate your presentation with those of the other students in your group.

Science/QL course  
**Skepticism and Belief**  
 Judith Moran  
 Department of Mathematics  
 Barbara Walden  
 Department of Physics  
 Trinity College, Hartford

- **Audience:**
  - non-science, non-math majors
  - students fulfilling “natural sciences” distribution requirement
- **Our Goals:**
  - develop quantitative & scientific literacy
  - foster understanding of how this literacy is relevant to students’ lives
  - active engagement of students in every class session

### Course Structure

- What’s the *chance* of that?  
 Probability, statistics, and the lottery  
 Probability & coincidence
- Seeking patterns; making a logical argument  
 Collecting & visualizing quantitative information  
 Case study: Snow and Cholera  
 Case study: The Space Shuttle Challenger
- Experimentation and the scientific method  
 Design, carry out, and present an experiment

### Assignment #4

#### Reading and class preparation

1. What is the most amazing coincidence you have experienced? Write a description of what happened and why you were amazed. What do you think is the probability of such an event occurring by chance? NOTE: Please type or word-process your essay.

### Coincidence (Diaconis & Mosteller):

A surprising concurrence of events, perceived as meaningfully related, with no apparent causal connection.

Lecture 5

### Factors Affecting Apparent Coincidences

- Hidden causes
- Selective memory
- Multiple end points
- Close but not exact matches
- Faulty probability calculations
- Human tendency to look for patterns

Lecture 6

## The Law of Truly Large Numbers

With a large enough sample, any outrageous thing is likely to happen.

Lecture 6

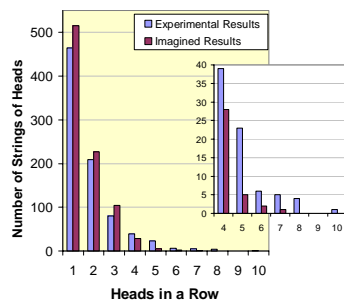

## Distinguish between:

- How likely is this to happen?
- How likely is an event like this to happen to *me*?

Lecture 6

## Coincidence & Coin Flipping

Number of Heads in a Row  
19 Sets of 160 Flips Each

## Developing the ability to think independently and quantitatively about science

doing well-defined statistics problems

critiquing presentations of statistics found in the media

critiquing other people's use of statistical analyses and their subsequent conclusions & decisions

designing and presenting original experimental work

## Assignment #4

### Reading and class preparation

2. Read Handout 6 about Evelyn Adams, who won the New Jersey lottery twice. The article, condensed from *The New York Times*, gives the probability of such a coincidence occurring as about 1 in 17.3 trillion.
  - a) How did the lottery officials arrive at this probability?
  - b) Can you think of any factors that the lottery officials many have neglected to take into account in their determination of this number?

## Stock Performance & CEO Handicap

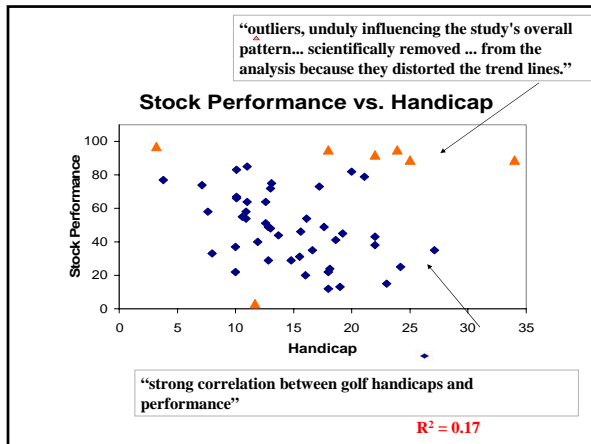

### Investing It; Duffers Need Not Apply

by Adam Bryant  
*The New York Times*, May 31, 1998

"... If a chief executive is a better-than-average golfer, he is also likely to deliver above-average returns to shareholders.

...

'For all the different factors I've tested as possible links to predicting which C.E.O.'s are going to perform well or poorly, this is certainly one of the oddest -- but also the strongest -- I've seen,' he said. 'There's got to be something here.' "

## Our Favorite Student Experiments

### What's So Great About Breakfast?

- Marcia Greenblatt & Claire Matteson

Does eating breakfast affect your mental performance?

**Gender & Graph Proficiency**  
Rob Champagne & Desiree Pearson

Do poor graphs lead people to draw erroneous conclusions based on their own prejudices?

**Is the Motion of a Pendulum Affected by the Proximity of a Man Compared to a Woman?**  
Daphne Konstantinides & Greg Pagnini

## Useful Resources

- *How We Know : An Exploration of the Scientific Process*, by Martin Goldstein
- *Visual & Statistical Thinking : Displays of Evidence for Decision Making*, by Edward R. Tufte
- *What Do You Care What Other People Think? : Further Adventures of a Curious Character*, by Ralph Leighton and Richard Phillips Feynman
- Class website: <http://caribou.cc.trincoll.edu/~bwalden/coll155.html>
- Dartmouth *Chance* website: <http://www.dartmouth.edu/~chance/>

QL-enriched course:

Colonialism in Latin America
