Prokop Schield excelled in cyber security

The first-year pupil did not lose Cyber security competition in Cyber Security Cyber High School Competition. He first qualified as the 34th in the finals, where he subsequently ranked 11th.

Since most of the participants were graduates, and in addition, from schools specializing in IT or intensively engaged in IT, it is a great result. The competition had 2 rounds and it was necessary to break the password so that the contestants could start solving the problems. The first 24 went into the second round, which was a team. The first 15 will also take part in 3 events, which will bring 5 finalists to the international round in London.
